

AI that opens doors— *not another gatekeeper.*

A private, explainable career coach that turns any job listing into an evidence-based readiness map — and turns the gaps into proof a student can own.

THE PROBLEM

Job listings are written in a language students are still learning.

01

Assumed fluency

Tools expect users to already understand job-market vocabulary and self-translate their experience into it.

02

Unexplained scores

A single opaque “match score” becomes a verdict with no evidence and no route to improve it.

03

Invisible evidence

School projects, volunteering and informal work — a first-timer's only proof — are ignored entirely.

The gap isn't ability. It's *translation*.

Students already have the evidence. They just can't name it in the words a hiring system reads. CareerReady is the translator — and then the coach that closes what's genuinely missing.

THE PRODUCT

One loop: map → prove → rehearse.

STEP ONE

Map my path

Any listing, any industry. A readiness score where every skill bar shows the evidence behind it.

STEP TWO

Seven-day sprint

Gaps become seven 25-minute actions that end in a portfolio artifact and an application pack.

STEP THREE

Interview lab

Rehearse an answer; get feedback on context, action and outcome — never on personality.

EXPLAINABLE MATCHING

Every score shows its receipts.

READINESS

Close — 3 gaps to close

A learning aid, not a hiring decision.

Skill evidence

Data storytelling

"presented the result to our coordinator"

86%

Spreadsheet analysis

"analyzed 300 survey responses in Excel"

79%

SQL

No supporting evidence found

22%

Power BI

Adjacent tool experience only

34%

● Evidenced strength ● Gap to build

Degree prestige is never scored

RÉSUMÉ REVIEW

It rewrites your lines, not your ego.

Quantification

4 of 7 bullets carry no number or outcome.

Weak openers & clichés

“Responsible for”, “hard-working team player”.

Bias-inviting details

Age, marital status and photo detected — remove them.

Keyword coverage

Matched against the target post, not a generic list.

LINE-BY-LINE REWRITE

~~Responsible for helping with a recycling project at school.~~

- Passive opener with no personal action
- No measurable outcome

Analyzed 300 survey responses to diagnose bin-labelling errors, then shipped a dashboard that lifted correct sorting 18% in one week.

PROOF, NOT ADVICE

Seven days. Seven 25-minute actions.

2 / 7
DAYS COMPLETE

01

SCOPE

Pick the gap that pays

Choose one missing skill with the highest listing weight.

02

LEARN

One concept, applied

A single tutorial, immediately used on real data.

03

BUILD

Ship the rough cut

An artifact that exists beats a plan that doesn't.

04

REFINE

Make it legible

A README and a screenshot a stranger can follow.

05

WRITE

Two résumé bullets

Action, method, measurable outcome — drafted for you.

06

REHEARSE

Tell it in 90 seconds

Turn the artifact into an interview story.

07

APPLY

Send the pack

Tailored résumé, note and portfolio link, ready to go.

04 INTERVIEW LAB

Adaptive practice, not personality tests.

We check context, personal action and outcome. Nothing about tone, confidence, or “culture fit”.

QUESTION 1 OF 3

Tell me about a time you used data to change a decision.

During our school recycling project I analyzed 300 survey responses in Excel, found that confusing bin labels were the main problem, built a dashboard, and presented it to our coordinator. Correct sorting improved 18% the next week.

Context set

Named the project and the data

Personal action

“I analyzed”, “I built” — not “we”

Measured outcome

18% improvement, one week

PRIVACY BY ARCHITECTURE

Your résumé never leaves your laptop.

In-browser PDF parsing

pdf.js reads the file locally; the extracted text stays editable and stays put.

On-device model

A quantized MiniLM sentence-embedding model compares meaning in the tab itself.

No candidate profile

No account, database or paid API is required to use the prototype anonymously.

Never offline

If the model is slow to warm up, a transparent local evidence engine answers instantly.

Protected characteristics, school prestige, photographs and personality are never scored — and the user can see, challenge, or ignore every result.

RESPONSIBLE BY DEFAULT

What we refuse to build.

OUT OF SCOPE, PERMANENTLY

Hiring recommendations or rankings

Employability, medical or psychological diagnoses

Scoring of prestige, photos or protected traits

Personality inference from an interview answer

BEFORE REAL-WORLD DEPLOYMENT

Published model card and limitations

Multilingual bias testing

Consented analytics and deletion controls

An independent fairness audit

IMPACT & VIABILITY

One counsellor can't sit with 400 students. This can.

Schools & placement cells

Scalable, private coaching for every student — without building a database of minors' résumés.

NGOs & first-gen programs

Works offline-tolerant, on modest hardware, with no per-seat inference cost to fund.

The student

Leaves with a portfolio artifact, rewritten bullets and a rehearsed story — evidence they own.

₹0 marginal inference cost

0 résumés stored server-side

7 days from gap to artifact

A private translator,
a real next step,
proof they own.

Live now — any listing, any industry, no signup required.
